Richard H. Fleming
Executive Officer

INTRODUCTION

This report contains all of the offshore data collected during 1952 by University of Washington personnel aboard the Department of Oceanography research vessel BROWN BEAR. Station location charts are presented before the data for each cruise (see pages 1, 3, 7, and 15). BROWN BEAR Cruise No. 1 was primarily carried out inside the Strait of Juan de Fuca and Puget Sound, and thus had only the three offshore stations shown on the chart on page 1. Data for stations inside the Strait and for Puget Sound taken during 1952 will be presented in separate reports.

Station Numbering System

All stations occupied by the BROWN BEAR are numbered consecutively, independent of their location.

Sampling Bottles

Water samples were taken with Nansen bottles, enlarged modified $\frac{3}{4}$ -liter Knudsen bottles, and Fjarlie bottles (1).

Determination of Properties

Deep-sea reversing thermometers were used to determine temperature. Copenhagen standard sea water was used exclusively as the standard in the determination of salinity of the sea water. Dissolved oxygen was determined by the modified Winkler method described by

Thompson and Robinson (2). Phosphates which were observed only on Cruise 7 are presented in the Appendix (pages 25-26). These were determined by the method described by Thompson and Robinson (3), except that the color intensity was measured by an electric eye photometer (4) instead of using Nessler tubes. The depths reported for sub-surfaces observations were calculated from measured wire angle, from unprotected reversing thermometer readings, and from curves of wire length minus thermometric depth versus wire length, the L-Z curve method described by LaFond (5).

Data

The time at which the messenger was dropped on the first cast is listed for the +8 time zone. Positions are given to the nearest minute. Depth in fathoms was obtained with the aid of a Navy NMC echo sounder. Weather is reported in the Navy bathythermograph weather code given in H. O. Publication No. 606-C, except in cases where the only weather phenomenon reported is the state of the sky. For the state of the sky the following symbols were used: b., clear sky; b.c., blue sky with detached clouds; c., sky mainly cloudy; and o., sky overcast. Wind velocity is reported in knots. Air temperature is reported in degrees Fahrenheit. In the cases where both dry and wet bulb temperatures were observed, the dry bulb reading is listed first, followed by a virgule (/) and then the wet bulb reading.

All data are actual observed values. The maximum depth of sampling was 2000 meters wherever the depth of the water permitted. An unusual amount of pre-tripping of sampling bottles occurred during

the first several cruises. This resulted in some loss of data with gaps in the normal depth sequence. All clearly questionable data have been excluded.

The presentation of these data in this form does not constitute publication. Subsequent, more rigorous analyses of these data may disclose errors which are not apparent at this time.
